

Web-Based Games/ Apps

For math and reading, there are web-based games and apps are very engaging and simulating. Web-based games and apps help students practice and enhance their skills. For math, I would recommend using ABCMouse.com, ABCYa.com, Math Playground, and Cool Math Games. For reading, I would recommend using educationworld.com The Reading Machine: Reading Games. This website has thirty-six links to online games that help teach and reinforce important reading skills.

TEACHER TIPS

Miss Kelley

Talk About Reading

Make reading something that is a time for laughter and talk, but also quiet and relaxing for about 10-15 minutes. Share the reading by taking turns or see whether your child want to read or be read to today. When talking about the book you can talk about the pictures you see in the book. You and your child can also go to the library and choose books to share with each other.

Worksheets

For math, there are online printable worksheets or daily math practice sheets that I recommend utilizing. Bedtime Math can be made a routine every night where your child has a question of the day on a printed off activity sheet. For reading, there are worksheets that practice and improve reading comprehension, vocabulary and writing. One that I would recommend is k5learning.com because it has free printable worksheets that focus on those three reading skills.

“KEY: Knowledge Empowers You”

Manipulatives

At home, you can play with tactile objects that include manipulatives that we do not necessarily have in our classroom. You can use coins, a bag of dry beans, stickers, or shape cut outs. Those manipulatives help build your child’s number sense skills. Reading vocab manipulatives would include some types of flashcards that would be sent home with your child.

Board Games

For reading, you can play board games or card games together. Some board games that I recommend when practicing reading skills are Hedbanz, Boggle, and Scrabble. You can sing songs, read poems, and make up rhymes! Another fun reading game would be a word game like “I Spy” or “Simon Says”. Math: You can play board games involving math that include Cherry-O, Yahtzee, and Trouble. By playing board games with your children involving reading and math, they will be engaged in what they are learning and they will be practicing reading and math without even realizing.
